Software Engineer Internship Position

Discovery Machine® Inc. is a growing software developer and service provider for a variety of DoD and commercial customers.

Founded in 1999, Discovery Machine® develops a variety of software technologies aimed at opening up Artificial Intelligence (AI) to the masses. Our graphical modeling languages and development environments enable non-programmers to directly participate in the development of immersive training environments.

Made of a small, tight-knit team of talented engineers, Discovery Machine® develops and deploys a set of software solutions that push the boundaries of AI technology. From advanced research into completely novel AI technologies, to development of immersive 3D training environments, work at Discovery Machine® constantly exposes our employees to new and interesting engineering challenges.

We are looking for talented students who enjoy working with a small, relaxed team on a dynamic problem set. Applicants must enjoy learning new things, as the set of problems we address with our technology is constantly changing.

Work includes:
- Advanced research into novel AI applications
- Serious Game / Training Simulation development
- Development of graphical AI modeling languages and IDE's
- Work with speech and natural language recognition technologies

Responsibilities:
- Develop immersive training environments in Unity3D and other simulation environments
- Create AI behavior models for employment in a variety of domains
- Deploy to a variety of platforms, in a variety of domains (DoD, Healthcare, Energy)
- Employ cutting edge AI research to create realistic characters and entities to enhance training experiences
- Develop and enhance speech recognition and natural language technologies
- Develop and enhance a graphical behavior and device modeling technology
- Work with Subject Matter Experts to capture knowledge about a variety of training domains
- Analyze user needs and develop software solutions
- Collaborate with a small team of talented engineers to design and optimize code
- Create design documents for complex software systems
- Perform routine software maintenance

Qualifications:
- **Must** be a U.S. Citizen; Work Visa is not eligible
- Strong analytical and critical thinking skills
- Must enjoy learning new things
- Actively seeking a Bachelor's degree or higher in Computer Science or a related field
- Background in AI is a plus
- User Interface Design experience is a plus
- Knowledge of Java, C#, or other programming languages
- Familiarity with relational databases such as MySQL, Oracle, and SQL Server
- Per Executive Order 14042, Ensuring Adequate COVID Safety Protocols for Federal Contractor, all employees, except in limited circumstances where an employee is legally entitled to an accommodation, must be fully vaccinated against COVID-19.

Why Work Here:
- Competitive Internship Wages

- Small Company Environment
- Flex Hours
- Snack Bar
- Casual Dress Code

Candidates meeting the above criteria will be contacted to discuss the opportunity and your experience. DMI is an equal opportunity employer offering competitive salary, benefits, and a flexible work schedule with core hours. All qualified applicants will receive consideration for employment without regard to race, color, religion, sex, or national origin.
